

Environment Lab/ Production ready

Microsoft Teams Direct Routing – Project Architecture.

Tenant: Tailooni.com

Hanan Tailooni

May, 2026

This Project demonstrates a secure and cloud-aligned Microsoft Teams Direct Routing solution with strong identity governance (IAM) , Azure-hosted Infrastructure, and reliable PSTN connectivity using Telnyx.

Stage1 / Implementation Tasks

- Configured Entra ID and applied CA policies
- Enforced MFA and least privilege access
- Restricted access to Teams and Admin portals based on Conditions.

Stage2/ Implementation Tasks

- Created Windows server VM in Azure
- Configured NSG Rules, hardened VM and enabled only the required ports.
- Installed and Configured SBC

Stage3/ Implementation Tasks

- Created SIP trunk with the carrier
- Configured SBC with the carrier SIP trunk details
- Secured signaling using TLS and media using SRTP.
- Bought and verified required phone numbers.
- Validated registration and call routing using the Web dialer.

Stage4/ Implementation Tasks

- Added SBC as a Direct Routing SBC on TAC.
- Configured Voice Routing policies and PSTN usage.
- Assigned phone numbers to Teams users.
- Verified end-to-end call flow.

Stage5/ Validation & Operational Testing

- Validated IAM policies and sign-in conditions
- Placed inbound and outbound calls
- Verified successful call setup and media
- Reviewed SBC logs and call traces.

Hands-On Configuration & Validation Evidence:

Azure VM – Hosted SBC:

TAC -User configuration:

The screenshot shows the Microsoft Teams admin center interface. The left sidebar contains navigation options: Dashboard, Add-on Licenses, Teams, Users, Manage users (selected), External collaborator, Teams devices, Teams apps, Manage apps, and Permission policies. The main content area is titled 'Manage users \ Hanan Tailooni'. It features a user profile card for Hanan Tailooni with a circular avatar containing 'HT'. To the right of the avatar are action buttons: Call user, Start a chat, Send email, Request client logs, Copy object ID, and a location pin icon for Jordan. Further right, a card displays the user's details: Phone number (+1 315 [redacted]), Email ([redacted]), and Directory status (Online). To the right of the profile card are two summary cards. The 'Meetings & calls overview' card shows a donut chart for 'Total meetings & calls' with a value of 30, and a legend for 'Without issues' (blue) and 'With issues' (red). The 'Weekly activity' card shows 'Meetings' as two dashes, 'Calls' as 30, and 'Total duration' as 00:00:00. At the bottom right, there is a section titled 'Fix meeting issues for users' with a description 'Investigate and fix call quality issues for meetings in progress.' and a button 'View active meetings'.

Carrier to SBC SIP Connection status:

The screenshot shows the 'SIP Connections' page in a management console. The top navigation bar includes 'SIP Connections' and 'STIR/SHAKEN Hosted Certificates'. The main heading is 'SIP Connections' with a green star icon. Below the heading is a description: 'SIP Connections allow users to set SIP trunks for Inbound and Outbound calling'. On the right side of the heading area are two buttons: 'Test call' and 'Create SIP Connection'. Below the heading is a table with the following columns: Name, Status, Type, AnchorSite, Numbers, Created At, and Tags. The table contains one row with the following data: Name is 'Teams ⇌ Anynode SBC ⇌ Telnyx', Status is a green dot, Type is 'FQDN', AnchorSite is 'Latency', Numbers is '2', Created At is '7 May 2026 9:33 AM', and Tags is '+'. To the right of the table is a 'Filters' button. At the bottom right of the page, there is a 'Rows per page' dropdown set to '10' and a pagination indicator '1 - 1 of 1' with navigation arrows.

Name	Status	Type	AnchorSite	Numbers	Created At	Tags
Teams ⇌ Anynode SBC ⇌ Telnyx	●	FQDN	Latency	2	7 May 2026 9:33 AM	+

Key Technical Skills Demonstrated

- Microsoft Teams Direct Routing
- Microsoft Teams Phone System
- Azure VM Administration
- Microsoft Entra ID (Azure AD)
- Conditional Access Policies
- MFA Enforcement & Geo-Restriction Policies
- SIP / TLS / SRTP Signaling
- AnyNode SBC Deployment & Configuration
- Telnyx SIP Trunk Integration
- Voice Routing Policies & PSTN Usage
- SIP Troubleshooting & Diagnostics
- TLS Connectivity Validation
- Enterprise Voice Call Flow Analysis
- SIP Header & Caller ID Troubleshooting
